Welcome Letters

Gianluca Gambarini
ESE President

Dear Colleagues,
On behalf of the European Society of Endodontology and its Executive Board, it is my great pleasure to welcome you to the Vilnius Autumn Meeting.
We are delighted to host you in Vilnius, the capital of Lithuania, a city rich in history, culture, and academic tradition.
This meeting brings together clinicians, researchers, educators, under-graduate and post-graduate students from across Europe and beyond, offering a valuable opportunity to exchange knowledge, discuss the latest scientific advances in endodontology, and strengthen professional collaboration within our community.
The scientific program has been carefully designed to provide high-quality lectures, engaging discussions about progress in research and clinical procedures concerning four specific topics, delivered by distinguished speakers in the field. We hope it will inspire fruitful dialogue, critical thinking, and will provide new knowledge that you can carry into your daily practice and/or research.
Beyond the scientific sessions, you could also enjoy the vibrant atmosphere of the city and experience Lithuanian hospitality.
Looking forward to meet you in Vilnius, wishing you a rewarding, inspiring, and enjoyable ESE Autumn Meeting.
With warmest regards

Paulius Tušas
President, Lithuanian Society of
Endodontology

Dear ESE Community,
On behalf of the Lithuanian Society of Endodontology, it is my great honour and sincere pleasure to welcome you to the ESE Autumn Meeting 2026, taking place in Vilnius, Lithuania, on 23 and 24 October 2026, at the Radisson Blu Hotel Lietuva.
Hosting the European Society of Endodontology in Lithuania for the first time is a truly historic moment for our professional community. We are proud to welcome clinicians, researchers, educators, postgraduate and undergraduate students from across Europe and beyond to our country and our capital city.
Vilnius is a city where tradition meets innovation — rich in history, vibrant in culture, and strongly connected to academic and scientific progress. We hope you will enjoy not only the scientific programme of the meeting, but also the unique atmosphere of Vilnius, including its UNESCO-listed Old Town, and experience the charm of autumn in Vilnius, a season that brings a special warmth and beauty to the city.
The ESE Autumn Meeting provides an outstanding opportunity to exchange knowledge, explore the latest scientific and clinical developments, and strengthen collaboration within the endodontic community. The programme has been carefully designed to offer high-quality lectures, clinically relevant insights, and evidence-based perspectives on key contemporary topics — supporting both daily practice and research.
This congress is an excellent platform to share ideas, gain international experience, and connect with the wider European endodontic community.
We truly look forward to welcoming you to Vilnius in October 2026 and to sharing with you an inspiring and memorable meeting in Lithuania.
With my warmest regards,

Committees

ESE EXECUTIVE BOARD

President — Gianluca Gambarini
President Elect — Vittorio Franco
Past President — Hal Duncan
Treasurer — Casper Kruse
Chair Research Committee — Matthias Widbiller
Chair Clinical Practice Committee — Antonis Chaniotis
Chair Membership Committee — Valérie Chevalier
Chair Education and Scholarship Committee — Fadi Jarad
Chair Benefits of Endodontics Committee — Helena Fransson
Chair Engagement and Communication Committee — Laura Andriukaitiene

LOCAL ORGANISING COMMITTEE

Registration: registration.eseautumnmeeting2026@c-in.eu
Abstracts: abstracts.eseautumnmeeting2026@c-in.eu

General Meeting Information

MEETING VENUE

The ESE Autumn Meeting 2026 will be held in the city of Vilnius, Lithuania, at the Radisson Blu Hotel Lietuva. Address: Konstitucijos pr. 20, LT-09308 Vilnius, Lithuania.

LANGUAGE

The official language of the Meeting is English.

MEETING SECRETARIAT OPENING HOURS

22nd October 2026 | 14:00 – 18:00

23rd October 2026 | 08:00 – 18:00

24th October 2026 | 08:00 – 18:00

CLOAKROOM OPENING HOURS

23rd October 2026 | 08:00 – 18:00

24th October 2026 | 08:00 – 18:00

EXHIBITION OPENING HOURS

23rd October 2026 | 09:00 – 18:00

24th October 2026 | 09:00 – 17:15

MEETING NAME BADGE

Participants must wear their badges at all times.

WI-FI

Dedicated Wi-Fi is available for all participants throughout the meeting venue:

Network: ESEAM2026

Password: ESEAM2026

NO SMOKING

Smoking is strictly forbidden in the meeting venue.

MOBILE PHONES

Participants must keep their phone in the off or silent mode when attending lectures.

PHOTOGRAPHY

Participants must not take photographs or make video recordings of lectures.

An official photographer will record meeting activities at Radisson Blu Hotel Lietuva on behalf of the ESE. These pictures may be used by the ESE to promote future activities. If you do not authorise the capture of your images, please advise the Secretariat onsite and inform the photographer.

MEALS

Complimentary coffees/refreshments and lunches will be available to all in the Exhibition Area. Welcome Drink will be available on Friday at 16:55.

INSURANCE

The meeting organisers cannot accept liability for personal injuries sustained or for loss or damage to property belonging to meeting participants, either during or as a result of the meeting. Please ensure you have a valid personal insurance.

Local Information

ABOUT VILNIUS

Area 401 km²
Population ~600,000

LANGUAGE

Lithuanian is the official language. English is widely spoken in central areas.

CURRENCY

Euro (EUR). Credit cards are accepted almost everywhere.

TIME

Eastern European Time (EET / UTC+2). During the meeting Lithuania is still on summer time (EEST / UTC+3) — clocks go back one hour on Sunday 25 October.

CLIMATE IN VILNIUS

October temperatures in Vilnius:
Average high: 10 °C
Average low: 4 °C

VAT – VALUE ADDED TAX

Standard VAT is 21%. Non-EU visitors may be eligible for a tax refund on qualifying purchases.

TIPPING

Tipping is appreciated but not mandatory. A 5–10% tip for good service is common in restaurants.

SHOPPING AND BUSINESS HOURS

Most shops are open 10am–8pm, Monday to Saturday. Some are open on Sundays in central areas.

SMOKING

Smoking is prohibited indoors in public places. Outdoor smoking areas are available.

EMERGENCY CONTACTS

General emergency number for police, ambulance and fire department: 112.

ELECTRICITY

230V, standard European plugs (two round prongs).

TELEPHONE

The telephone prefix for calling Lithuania from other countries is: +370

DISCOVER VILNIUS

Vilnius is the capital of Lithuania, known for its baroque architecture, vibrant cultural scene and UNESCO-listed Old Town. The venue is a 10-minute walk from the historical centre.

Getting around

Buses, express buses and trolleybuses connect all city districts. The TRAFI app shows routes, prices and schedules in real time. Bolt is the most popular ride-sharing app.

FRIDAY

23 October 2026

Pulp Responses: From Research to Practice

09:00 – 09:30 **Opening Ceremony**

TOPIC: VITAL PULP THERAPY

Moderators: Matthias Widbiller & Giorgos Tzanetakis

09:30 – 10:30 **Rethinking Vital Pulp Therapy: A Scientific Perspective on Pulpitis**
Imad About (France)

10:30 – 11:00 **Coffee Break**

11:00 – 12:00 **Clinical Management of Deep Caries and the Exposed Pulp**
Tugba Turk (Turkey)

12:00 – 12:25 Discussion

12:25 – 13:00 **Poster Presentation Sessions**

13:00 – 14:00 **Lunch and Networking**

TOPIC: MINERALISATION AND CALCIFICATION

Moderators: Aleksandar Jakovljević & Peter Kiefner

14:00 – 15:00 **Pulp Mineralisation: Biological Regulation and Clinical Challenges**
Hal Duncan (Ireland)

15:00 – 15:30 **Coffee Break**

15:30 – 16:30 **Managing Calcified Canals: From Detection to Treatment Strategies**
Hugo Sousa Dias (Portugal)

16:30 – 16:55 Discussion

16:55 – 18:00 **Welcome Drink**

SATURDAY

24 October 2026

Structural Failures: From Research to Practice

09:00 – 09:30 **ESE / AAE new diagnostic classification for pulpal and apical disease. Towards a global standard in endodontic diagnosis**
Lise-Lotte Kirkevang (Denmark)
Moderators: Xenos Petridis & Tugba Turk

TOPIC: CRACKS AND FRACTURES

Moderators: Ana Arias & Aleš Fidler

09:30 – 10:30 **Cracking up... aetiology, prevention and management of cracked teeth**
Shanon Patel (United Kingdom)

10:30 – 11:00 **Coffee Break**

11:00 – 12:00 **Clinical Management of Cracks and Root Fractures: An Interdisciplinary Perspective**
Tadas Venskutonis & Julius Maminskas (Lithuania)

12:00 – 12:25 Discussion

12:25 – 13:00 **Poster Presentation Sessions**

13:00 – 14:00 **Lunch and Networking**

TOPIC: RETREATMENT

Moderators: Pia Sunde & Antonis Chaniotis

14:00 – 15:00 **Retreatment Outcomes: What Matters Most?**
Hagay Shemesh (The Netherlands)

15:00 – 15:30 **Coffee Break**

15:30 – 16:30 **Retreatment or Implant: Clinical Decision Making**
Augusto Malentacca (Italy)

16:30 – 16:55 Discussion

16:55 – 17:15 **Closing Ceremony**

Programme subject to change. For the latest updates visit www.easeautumnmeeting.com

Industry Workshops

ESE Autumn Meeting 2026 will have a Hands-On course organised by *Henry Schein Endodontics*, only available to registered participants upon payment and subject to availability onsite. Book your course in advance to guarantee your place.

23rd of October: 14:00-16:00

24th October: 09:00-11:00

Friday, 23 October

**09:00 – 09:30 Opening Ceremony****TOPIC: VITAL PULP THERAPY**

Moderators: Matthias Widbiller & Giorgos Tzanetakis

09:30 – 10:30 Rethinking Vital Pulp Therapy: A Scientific Perspective on Pulpitis*Imad About (France)*

Vital pulp therapy has the potential to significantly prolong the life of a tooth. However, maintaining pulp vitality following carious lesions or pulp exposure remains a major clinical challenge, as successful healing is highly dependent on the degree of pulpal inflammation. The delicate balance between inflammation and regeneration is critical in determining the pulp's healing capacity within its confined, inextensible environment.

Tricalcium silicate-based materials are currently considered the materials of choice for vital pulp therapy owing to their chemical, physical, and bioactive properties. Beyond providing a hermetic seal when applied to exposed pulp tissue, emerging evidence demonstrates that these materials possess anti-inflammatory properties, thereby creating adequate conditions to dentin-pulp regeneration and improved clinical outcomes. Furthermore, recent findings indicating the intrinsic ability of the dental pulp to eliminate infiltrating cariogenic bacteria enhance our understanding of how these materials expand the therapeutic boundaries of vital pulp therapy, including their successful application in cases of dental trauma with pulp exposure and irreversible pulpitis. This presentation will illustrate the regenerative potential of the dental pulp and its capacity to eliminate cariogenic bacteria. It will highlight the bioactive properties of calcium silicate-based materials, demonstrate their anti-inflammatory effects, and discuss their role in reducing postoperative pain. Advances in pulp biology and material science that are driving a paradigm shift in vital pulp therapy will also be addressed. Finally, a novel patent describing pulp regeneration without tissue volume loss will be presented.

10:30 – 11:00 Coffee Break**11:00 – 12:00 Clinical Management of Deep Caries and the Exposed Pulp***Tugba Turk (Turkey)*

The management of deep caries and exposed pulp is undergoing a fundamental paradigm shift, driven by advances in pulp biology and high-level clinical evidence. Today, the goal is no longer to remove and replace, but to preserve, modulate, and support the healing potential of the pulp-dentin complex. Pulp preservation techniques, encompassing vital pulp therapy modalities, represent a spectrum of evidence-based interventions that challenge traditional treatment paradigms. Emerging data indicate that, even in cases diagnosed as irreversible pulpitis, the inflamed pulp may retain a significant capacity for healing when managed with appropriate case selection, controlled disinfection, and bioactive materials.

This lecture will integrate current evidence with clinical reasoning to redefine decision-making in deep caries and pulp exposure. Particular emphasis will be placed on the dynamic nature of pulpal inflammation, the limitations of existing diagnostic frameworks, and the importance of intraoperative findings—such as bleeding characteristics—in guiding treatment strategies. A structured, clinically applicable workflow will be presented, focusing on achieving predictable outcomes through biologically respectful interventions. A diverse series of clinical cases with long-term follow-up will be presented, highlighting treatment outcomes and decision-making across a spectrum of clinical scenarios.

Ultimately, this presentation aims to shift the clinical mindset: from intervention to preservation, from replacement to regeneration, and from protocol-driven treatment to biology-driven decision making.

12:00 – 12:25 Discussion**12:25 – 13:00 Poster Presentation Sessions****13:00 – 14:00 Lunch and Networking**

Friday, 23 October

**TOPIC: MINERALISATION AND CALCIFICATION**

Moderators: Aleksandar Jakovljević & Peter Kiefner

14:00 – 15:00 Pulp Mineralisation: Biological Regulation and Clinical Challenges*Hal Duncan (Ireland)*

Concerns over the cost and destructive nature of dental treatment have led to a surge in research and practice related to vital pulp treatment (VPT) for managing the cariously-exposed and traumatically exposed pulp. Although an exciting opportunity for us all, how much do we know about the tertiary dentine deposition and the pulps response to exposure and subsequent material placement. The aim of this lecture is to describe from a scientific and practical viewpoint the nature of pulpal mineralisation responses, consider the role of the material, the operator and other variables in improving the response, before discussing the clinical challenges of under and overproduction of mineral at the tissue/material interface.

Objectives: During this presentation we aim to answer the following questions in this area:

- Management of pulp exposure in VPT stimulates the formation of a hard tissue bridge, but is this reparative dentine or dystrophic mineralisation?
- Is pulpal mineralisation important?
- Which cells form the bridge?
- Does the material used affect the nature of the response?
- Is regeneration of dentine or pulp tissue possible?

15:00 – 15:30 Coffee Break**15:30 – 16:30 Managing Calcified Canals: From Detection to Treatment Strategies***Hugo Sousa Dias (Portugal)*

Calcified root canals represent a major challenge in contemporary endodontics, compromising diagnosis, access, and treatment predictability. Pulp canal obliteration, commonly associated with trauma, ageing, or chronic irritation, leads to canal narrowing or disappearance, increasing the risk of iatrogenic errors such as perforation, excessive dentine removal, and missed anatomy.

Effective management requires precise diagnosis and a tailored therapeutic strategy. This lecture will present a clinically oriented approach to calcified canals, from detection using CBCT and magnification to advanced treatment strategies. The advantages and limitations of three main approaches—free-hand, static guided endodontics, and dynamic navigation—will be critically discussed.

Free-hand techniques offer flexibility but are highly operator-dependent. Static guidance improves accuracy and safety through preoperative digital planning, although it lacks intraoperative adaptability. Dynamic navigation provides real-time guidance, enhancing precision while maintaining flexibility, but involves higher costs and a learning curve.

Clinical strategies to optimise outcomes, including conservative access design and ultrasonic techniques, will be addressed. Finally, future perspectives will explore the emerging role of artificial intelligence in diagnosis, planning, and guidance, with potential to further improve safety and predictability.

Mastering these evolving approaches is essential to successfully manage calcified canals in modern endodontic practice.

16:30 – 16:55 Discussion**16:55 – 18:00 Welcome Drink**

Saturday, 24 October

09:00 – 09:30 ESE / AAE new diagnostic classification for pulpal and apical disease. Towards a global standard in endodontic diagnosis

Lise-Lotte Kirkevang (Denmark)

Moderators: Xenos Petridis & Tugba Turk

The development of a new international classification for pulpal and periapical diseases represents a critical step for modern endodontics. Existing diagnostic terminology – largely unchanged for over a decade – no longer fully reflects advances in biological understanding, imaging, and clinical practice.

This initiative, led collaboratively by the European Society of Endodontology and the American Association of Endodontists, aims to establish a clear, evidence-based, and clinically applicable diagnostic framework. Importantly, it is designed not only for specialists, but also for general dentists and researchers, ensuring broad usability across settings.

A globally recognized classification is essential to:

- Standardise communication between clinicians, educators, and researchers worldwide
- Improve diagnostic consistency and treatment decision-making
- Enable comparability of research outcomes across studies and populations
- Support education and guideline development based on shared terminology

Ultimately, this work lays the foundation for a common diagnostic language in endodontics—one that is adaptable to future scientific advances and emerging technologies, while remaining practical in everyday clinical care.

TOPIC: CRACKS AND FRACTURES

Moderators: Ana Arias & Aleš Fidler

09:30 – 10:30 Cracking up... aetiology, prevention and management of cracked teeth

Shanon Patel (United Kingdom)

The incidence of cracked teeth and longitudinal root fractures is increasing and can be challenging from a diagnostic and/or management perspective for both endodontist and general dentists. Management requires a risk-based, individualised approach, including provision of cuspal coverage restorations as well as management of parafunctional habits to limit crack propagation and improve prognosis.

Aim

This lecture gives a pragmatic approach on diagnosis, prevention, and management of cracked teeth to increase longevity based on the current evidence-based, as well as a reflection of 25 year's clinical experience.

Objectives

- Appreciate the range of tooth cracks and their progression to vertical root fractures
- Identify aetiological and risk factors, including occlusal loading, ageing dentine, and endo-resto influences
- Understand how to diagnose cracked teeth and vertical root fractures
- Devise effective and individualised management and preventative strategies based on tooth and patient factors.

10:30 – 11:00 Coffee Break

Saturday, 24 October

**11:00 – 12:00****Clinical Management of Cracks and Root Fractures: An Interdisciplinary Perspective***Tadas Venskutonis & Julius Maminskas (Lithuania)*

Cracked teeth and root fractures represent some of the most diagnostically and therapeutically challenging conditions in contemporary dental practice, requiring close collaboration between endodontic and prosthodontic disciplines.

From an endodontic perspective, the primary objective is to minimise intraoperative uncertainty through thorough preoperative assessment—identifying crack presence and extent, pulpal status, and periodontal involvement prior to committing to a definitive treatment plan. This raises a fundamental clinical question: who should initiate treatment—the endodontist or the prosthodontist? The intraoperative discovery of a crack during access cavity preparation necessitates immediate critical decision-making: whether to pause, reassess the situation, and determine if endodontic intervention remains justified, or whether the prosthodontic prognosis is too compromised to proceed.

From a prosthodontic perspective, emphasis is placed on prevention, early identification of structurally compromised teeth, and the role of pre-endodontic coronal build-ups. Root cracks, root fractures, and the quantity and quality of residual coronal tooth structure are key determinants of tooth prognosis and prosthetic possibilities. Reliable treatment planning requires comprehensive diagnostics beyond radiological and clinical evaluation, including assessment of remaining structure, crack characteristics, periodontal response, and isolation possibility. Accordingly, management should begin with thorough tooth evaluation and prosthetic prognosis assessment, and definitive endodontic treatment should be performed only thereafter.

Consequently, the prognosis of cracked teeth is directly dependent on effective interdisciplinary synergy between the endodontist and the prosthodontist.

12:00 – 12:25

Discussion

12:25 – 13:00**Poster Presentation Sessions****13:00 – 14:00****Lunch and Networking****TOPIC: RETREATMENT**

Moderators: Pia Sunde & Antonis Chaniotis

14:00 – 15:00**Retreatment Outcomes: What Matters Most?***Hagay Shemesh (The Netherlands)*

This lecture will address the key factors influencing the outcome of orthograde endodontic retreatment, with emphasis on clinically meaningful success rather than radiographic healing alone. Retreatment decisions should be guided by the cause of failure, the quality of the existing treatment, the restorability and strategic value of the tooth, and the patient's symptoms, expectations, and overall prognosis. Additional considerations, including cost-effectiveness, imaging modalities, and the distinction between technical and patient-centered outcomes, will also be discussed.

Particular attention will be given to the biological and restorative factors that may influence healing after retreatment, as well as to the limitations of the available evidence on outcomes. The lecture will examine how outcome assessment may vary depending on whether success is defined by radiographic resolution, absence of symptoms, tooth survival, or preservation of function over time. It will further explore the role of case selection and decision-making in determining whether retreatment is justified, when it is likely to benefit the patient, and when alternative strategies such as monitoring, surgical intervention, or selective retreatment may be more appropriate.

15:00 – 15:30**Coffee Break**

Saturday, 24 October

15:30 – 16:30 Retreatment or Implant: Clinical Decision Making
Augusto Malentacca (Italy)

My presentation will focus on the clinical assessment that the dentist should be required to perform when deciding whether to pursue an endodontic retreatment or instead proceed directly with implant therapy. I deliberately use the conditional form because, unfortunately, in everyday practice the general dentist is increasingly inclined to prefer implant placement—driven both by economic considerations and by the relative procedural simplicity—rather than by the patient's actual best interest.

This trend risks undermining the remarkable advances achieved in recent years in the field of endodontics, largely due to the introduction and widespread use of the operating microscope. Endodontic retreatment—both surgical and non-surgical—is progressively becoming a niche procedure, carried out by a shrinking number of practitioners who uphold a deontologically sound, tooth-conserving approach.

I believe that endodontic societies should concentrate their efforts on educational campaigns directed primarily toward patients rather than dentists. In my view, attempting to sensitize the general dentist to these issues, although valuable, is largely a losing battle. Educating patients, on the other hand, could foster a more informed demand for conservative treatment options. During my presentation, I will also aim to delineate the boundary between appropriate endodontic retreatment and true over-treatment. I will evaluate a series of parameters not only related to endodontic criteria but also to patient age, the quantity and quality of remaining dentinal structure, functional and occlusal factors, and other clinical considerations that may influence prognosis and guide clinicians toward a genuinely individualized therapeutic decision.

16:30 – 16:55 Discussion
16:55 – 17:15 Closing Ceremony

- R34G** COMPARATIVE EVALUATION OF TWO DYNAMIC NAVIGATION SYSTEMS VS. FREEHAND APPROACH AND DIFFERENT OPERATOR SKILLS IN ENDODONTIC MICROSURGERY: A CADAVER STUDY
Elina Mekhdieva
- R35H** EVALUATION OF THE EFFECT OF LASER-ASSISTED DISINFECTION PROTOCOLS ON CHEMICAL COMPOSITION OF INTRACANAL DENTIN
Ivana Vidović Zdrilić
- R36H** SHEAR BOND STRENGTH OF BIODENTINE® XP TO CORONAL DENTIN AFTER DIFFERENT DENTIN SURFACE PRETREATMENTS
Katarina Grcić Šabić
- R37H** EXPERIMENTAL EVALUATION OF TWO ORIFICE OPENERS
Valentina Vincenzi
- R38H** COMPARATIVE EFFECTIVENESS OF 31 ENDODONTIC FILE SYSTEMS ON POSTOPERATIVE PAIN: A SYSTEMATIC REVIEW AND NETWORK META-ANALYSIS
Mohamed Elshabrawi
- R39I** EVALUATION OF THREE DIFFERENT CALCIUM SILICATE-BASED REPAIR MATERIALS IN TERMS OF MICROLEAKAGE: IN VITRO STUDY
Ece Çelikkbay
- R40I** IN-VIVO EVALUATION OF ROOT CANAL PREPARATION USING NOVEL RECIPROCATING MULTIPLE-USE NI-TI INSTRUMENTS
Görkem Nork
- R41I** INVESTIGATING THE EFFECT OF DIFFERENT BONDING PROTOCOLS ON THE SHEAR BOND STRENGTH OF RESIN-BASED COMPOSITE TO A HYDRAULIC CALCIUM SILICATE-BASED CEMENT
Lana Althweib
- R42I** ALGORITHMS IN PULP DIAGNOSIS: ADVANCEMENT OR RISKY DEPENDENCE?
Patricia Diogo

CLINICAL POSTERS (24 October)

- CP1A** MAXILLARY SINUSITIS OF ENDODONTIC ORIGIN: CASE REPORT
Lidiya Minko
- CP2A** FROM FAILURE TO REGENERATION: MANAGING AN UNTREATED FURCATION PERFORATION IN A 41-YEAR-OLD RETAINED DECIDUOUS MOLAR WITH CONGENITAL ABSENCE OF PERMANENT SUCCESSOR – A CASE REPORT
Sirine Ayed
- CP3A** PULP AND BONE REGENERATIVE THERAPY USING BIOMATERIALS AND DUAL RINSE 1-HYDROXYETHYLIDENE-1,1-DIPHOSPHONIC ACID IN A SINGLE VISIT: A CASE REPORT
Nirvana Mansour
- CP4A** ORTHOGRADE MANAGEMENT OF ENDODONTICALLY TREATED MOLARS ASSOCIATED WITH EXTENSIVE APICAL ROOT RESORPTION WITH MTA-PLUGS: A CASE REPORT WITH CBCT FOLLOW-UP
Sofia Solomonidou
- CP5A** PERSISTENT FACIAL SWELLING AND EXTRAORAL SINUS TRACT MISMANAGED WITH REPEATED ANTIBIOTIC THERAPY: RESOLUTION THROUGH NON-SURGICAL ENDODONTIC TREATMENT
Emek Bayındır
- CP6B** 14 YEAR FOLLOW UP OF SUCCESSFUL PERIAPICAL HEALING FOLLOWING ENDODONTIC RETREATMENT OF A MANDIBULAR MOLAR WITH AN UNTREATED CANAL: A CLINICAL CASE REPORT
Ksenija Silina
- CP7B** LATE RECURRENCE OF PERIAPICAL PATHOSIS FOLLOWING RET: A 9-YEAR FOLLOW-UP CASE
Yagmur Kilic

Poster Presentations

CLINICAL POSTERS (24 October)

- CP8B** NONSURGICAL MANAGEMENT AND HEALING OF A LARGE CYST-LIKE PERIAPICAL LESION: A CASE REPORT
Ieva Raščiūtė
- CP9B** STATIC - GUIDED ENDODONTICS: FROM ACCESS CAVITY TO MICROSURGERY – A TWO-CASE SERIES
Maria Merzioti
- CP10B** DIFFERENT TREATMENT STRATEGIES IN MANAGING ENDODONTIC TRAUMA PATHOSIS: A CASE REPORT WITH A TWO-YEAR FOLLOW-UP.
Leen Hasbini
- CP11C** NONSURGICAL RETRIEVAL OF A SEPARATED INSTRUMENT EXTRUDED BEYOND THE APEX: A CASE REPORT
Gülşah Uslu
- CP12C** HEALING OF APICAL PATHOSIS DESPITE PERSISTENT EXTRARADICULAR GUTTA-PERCHA: A CASE REPORT
Neslihan Demir
- CP13C** MANAGEMENT OF A VITAL MATURE PERMANENT TOOTH WITH DEEP CARIES AND PERIAPICAL RADIO LUCENCY: A CASE REPORT
Alexandra Malafaia Silva
- CP14C** MULTIDISCIPLINARY MANAGEMENT OF POST TRAUMATIC CERVICAL RESORPTION AND AESTHETIC DEFECTS IN THE ANTERIOR MAXILLA: A CASE REPORT
Batuhan Kurtoğlu
- CP15C** MANAGEMENT OF A 'MOLARISED' MAXILLARY FIRST PREMOLAR WITH THREE ROOTS AND THREE CANALS IN A GENERAL DENTAL PRACTICE SETTING: A CASE REPORT
Tapan Hebballi
- CP16D** IDENTIFICATION AND ROOT CANAL TREATMENT OF RADIX ENTOMOLARIS IN THE MANDIBULAR FIRST MOLAR: A CASE SERIES
Putri Artiningsih Dewa Ayu Nyoman
- CP17D** CONTROLLING ROOT RESORPTION IN 22-HOUR DELAYED REPLANTATION: A COMBINED TREATMENT STRATEGY
Ahmet Yolaçan
- CP18D** A COMPARATIVE EVALUATION OF COLD TEST AND PULSE OXIMETRY IN PULP VITALITY MONITORING FOLLOWING ENUCLEATION OF AN EXTENSIVE RADICULAR CYST: A CASE REPORT
Yaseen Helal
- CP19D** VITAL PULP THERAPY IN A DEEP CARIOUS MANDIBULAR MOLAR: SIX-MONTH OUTCOME FOLLOWING PARTIAL PULPOTOMY
Elias Pascal Bračko
- CP20D** MANAGEMENT OF A COMPLICATED CROWN FRACTURE OF YOUNG MAXILLARY INCISOR USING VITAL PULP THERAPY AND FRAGMENT REATTACHMENT: A CASE REPORT
Lucija Jančič
- CP21E** EXTERNAL CERVICAL ROOT RESORPTIONS- CLINICAL FORMS AND CLINICAL APPROACHES
Stefan Stefanescu
- CP22E** SUSPECTED ROOT RESORPTION IN GENERAL PRACTICE: EARLY REFERRAL, NOT PASSIVE MONITORING
Jose Alberto Garcia Molina
- CP23E** MANAGEMENT OF A SEVERELY INTRUDED UPPER CENTRAL INCISOR IN A PAEDIATRIC PATIENT USING ORTHODONTIC AND ENDODONTIC TREATMENT IN A UK DENTAL HOSPITAL
Giulia Pintaritsch
- CP24E** MANAGEMENT OF TWO PERIAPICAL CYSTIC LESIONS IN THE MAXILLARY FRONTAL REGION
Ivana Medvedec Mikić

Poster Presentations

EDUCATIONAL POSTERS (24 October)

- E1A** CRITICAL INTERPRETATION OF CONTEMPORARY BIOMATERIAL TERMINOLOGY AMONG DENTAL STUDENTS: EFFECT OF AN EDUCATIONAL INTERVENTION
Milos Papic
- E2A** TEACHING AND ASSESSMENT IN UNDERGRADUATE ENDODONTOLOGY: AN INTERNATIONAL DELPHI STUDY
Graham Quilligan
- E3A** EVALUATION OF AI-GENERATED VIDEO AND PODCAST SUMMARIES FOR TEACHING SCIENTIFIC LITERATURE IN POSGRADUATE ENDODONTIC EDUCATION.
Paula Riaza Solis
- E4A** FROM PROMISING ADD-ON TO CORE SOLUTION: CAN IMMERSIVE SIMULATION SYNCHRONIZE DENTAL EDUCATION WITH THE TECHNOLOGY-RICH CLINICS OF TOMORROW?
Laura Andriukaitiene

Dentsply Sirona (including the legacy Maillefer and VDW brands in Endodontics) is the world's largest manufacturer of professional dental products and technologies, with over a century of innovation and service to the dental industry and patients worldwide. Dentsply Sirona develops, manufactures, and markets a comprehensive solutions offering including dental and oral health products as well as other consumable medical devices under a strong portfolio of world class brands. Dentsply Sirona's products provide innovative, high-quality and effective solutions to advance patient care and deliver better and safer dental care.

Henry Schein Endodontics brings together three leading brands, EdgeEndo, FKG and Angelus under one vision: providing clinicians with a complete, integrated portfolio that supports every stage of endodontic treatment. By combining the strengths of our brands, we deliver solutions that cover the entire clinical workflow: from access and canal preparation to irrigation, obturation, restoration, and retreatment allowing clinicians to rely on a single trusted partner for all their endodontic needs.

Guilin Woodpecker Medical Instrument Co., Ltd. is a leading dental medical device manufacturer in China. Our products are exported to over 140 countries and regions worldwide, and we hold international certifications including ISO 13485, CE, and FDA, with a well-established sales network across Europe.

Our product portfolio covers the full dental treatment workflow, including ultrasonic scaling, endodontic treatment, light curing, piezo bone surgery, diode laser, implant motor, etc.

In international academic collaboration, we have developed the "Woodpecker International Academy" brand, regularly inviting renowned international lecturers for global lecture tours and hands-on training, with training centers established in Japan and other locations. We also collaborate with multiple universities on industry-academia-research partnerships to continuously drive dental innovation.

Woodpecker is committed to providing European dental professionals with cost-effective diagnostic and treatment solutions backed by innovative technology and reliable quality.
